Electrical Portable Appliance Inspection & Testing

ELECTRICAL SAFETY ADVICE

Thank you for choosing NSS Pure-PAT to carry out your Electrical Portable Appliance Testing.

Please be aware that although we have Inspected and Tested the appliances on the enclosed Test & Inspection schedule there are still further precautions you should take to minimise the risk of any appliance causing a fire or electric shock.

- **IMPORTANT: Integrity of Fixed Electrical Wall Sockets**

Part of the PAT Testing procedure is to test the earth continuity of appliances that require to be continuously earthed. The earth continuity of an appliance is a very important built in safety feature that should take away the risk of a person receiving

This safety feature can only work correctly providing the earth connection to the fixed wall socket is also properly connected otherwise there is a risk of an electric shock even if the actual appliance has been passed as safe.

Fixed wall sockets can have as many as 17 different fault combinations, therefore if you have not had the wall sockets tested within the past three years we would recommend that they are tested on our next visit. If you require any help or advice please

- **Remember Water and Electricity are not a safe combination!**

In areas such as kitchens and staff rooms it is imperative that water does not come into contact with any electrical current – always ensure that your hands are dry before connecting or switching on any electrical appliance – this includes the sockets and

- **Extension Leads**

Extension leads that are used in the workplace should have a Residual Current Device (RCD) permanently fitted if the extension lead is more than 15 metres in length.

Do not use high energy Fan Heaters or Radiators in multi-socket extension leads – the maximum combined wattage of all appliances in multi-socket extension leads should not exceed 3000 watts.

It is not good practice to have extension leads sited on floors or anywhere near where water or liquid has a high risk of spillage.

Coiled extension leads generate heat – the greater the coil the greater the heat. Coiled extension leads should NOT be used continuously - far better to have a made to measure or fully unwound lead than a coiled lead.

- **FAILED or Damaged Appliances**

On NO account should you continue to use any damaged or faulty electrical appliances that have failed our tests – you are risking the possibility of a fire or electric shock.

The above are just a small sample of measures that can be taken to ensure the safety of everyone who comes into contact with electrical appliances.

**CERTIFICATE OF
ELECTRICAL APPLIANCE TESTING**

CERTIFICATE NO:
14/2606

SATURN SOUND SYSTEM
44 HIGH STREET
SUTTON
ELY
CB6 2RB

This certificate confirms that the Portable Electrical Appliances that are listed on the enclosed test records and have Pure-PAT identification labels attached to the appliance at the above named premises have been formally Inspected, Checked and Tested for Electrical Safety using the guidelines as required by the Health & Safety Executive (HSE) and taking into account the requirements of the Health & Safety at Work Act 1974, the provision and Use of Work Equipment Regulations 1998 and the Electricity at Work Regulations 1989.

CERTIFICATE VALID UNTIL 26 JUNE 2015

AUTHORISED SIGNATORY
